

Smartwatch Dragon Companion

Jing Lyu (Arrow)

Role: Design, Research, Test

Tools: Figma

Timeline: 3 weeks

Product Statement

Dragon Companion is a smartwatch application that allows users to raise and interact with a small dragon.

The dragon grows from an egg and responds to user care such as feeding, playing, and cleaning.

The goal of the application is to create a light and emotional companion experience while integrating everyday smartwatch functions like notifications, reminders, and quick interactions.

Storytelling

Background Information

Smartwatches are designed for quick interactions and glanceable information.

Users typically interact with a smartwatch for only a few seconds at a time.

This application combines:

- Digital pet mechanics (similar to Tamagotchi)
- Emotional companion interaction
- ▲ Everyday smartwatch notifications

▲ The dragon becomes a small companion that reacts to the user's daily activities.

User Research

Five participants were interviewed about their expectations for a smartwatch companion app and how they would interact with it using voice commands.

Participants included:

- Illustrator
- Game designer
- Animation student
- Office worker
- Programmer

The interviews explored:

- expectations for a digital companion
- interaction style
- voice commands (utterances)

Research Findings

Users expect:

- Very short interactions (2–5 seconds)
- Simple tap or swipe gestures
- Emotional but low-pressure companionship
- Quick status information (hungry, sleepy, happy)

Voice interactions should allow:

- Very short interactions (2–5 seconds)
- Simple tap or swipe gestures
- Emotional but low-pressure companionship
- Quick status information (hungry, sleepy, happy)

Emotional Why / When / Where

Why	When	Where
Emotional companion	During idle moments	On the watch home screen
Quick care interaction	When receiving notifications	Anywhere during daily activities
Entertainment and relaxation	While waiting or taking breaks	Public transit, campus, home
Utility reminders	During alarms or reminders	Work, school, daily schedule

Motivation: Users want a small companion that is fun but not demanding.

User Persona

Persona 1 – Casual Companion User

Motivation:

- Enjoys cute characters
- Likes casual interactions
- Wants something relaxing

Needs:

- Quick interaction
- Emotional connection
- Simple gameplay

Frustrations:

- Too many notifications
- Complicated systems

Typical Utterances:

- “Feed my dragon.”
- “How is my dragon?”
- “Play with my dragon.”

User Persona

Persona 2 – Functional Smartwatch User

Motivation:

- Uses smartwatch for productivity
- Interested in smart assistants

Needs:

- Fast information
- Efficient voice commands
- Integration with reminders

Frustrations:

- Too many taps
- Slow interfaces

Typical Utterances:

- “Check dragon status.”
- “Set a timer with my dragon.”
- “Pause interactions.”

User Scenario – Positive

Situation:

User checks their smartwatch while waiting for the bus.

The dragon companion appears and shows a hungry icon.

Interaction:

User taps the screen and feeds the dragon.

The dragon plays a short animation and becomes happy.

Outcome:

The interaction takes less than five seconds and gives the user a small moment of enjoyment.

User Scenario – Negative

Situation:

User is in a meeting and receives multiple notifications.

The dragon companion appears too frequently and interrupts the workflow.

Interaction:

User uses voice command: "Mute dragon."

Outcome:

The system pauses interactions and only shows essential notifications.

This ensures the companion remains optional and non-intrusive.

Initial Sketches

Early sketches explored:

- dragon egg hatching
- basic care actions (feed, play, clean)
- idle animations
- integration with other apps

Key Interactions

Key interactions

Tap

- feed dragon
- play
- clean

Swipe

- switch between dragon status screens
- view dragon actions

Voice Utterances

- "Feed my dragon"
- "How is my dragon?"
- "Put my dragon to sleep"
- "Play with my dragon"

Interaction Types

Physical Interactions

- Tap
- Swipe
- Shake gesture

Voice Utterances

- “Feed my dragon”
- “Clean my dragon”
- “Show dragon status”

Each interaction triggers:

- animation
- haptic feedback
- visual status update
